PROJECT TITLE: Event Registration Web Page

---

1. Problem Statement:

Explain the need to improve the visual appearance of the event registration page from Assignment 1. Focus: Better layout and user experience via CSS.

---

2. Objective:

Apply CSS styling to transform a basic HTML page into a clean, professional-looking interface.

---

3. Requirements:

This section lists all the styling tasks implemented using CSS, including page layout design, background colors, form styling, table formatting, spacing, borders, and visual validation highlights to improve the appearance and usability of the web page.

1. Apply Global Styling:

Overall styles are applied to the entire webpage using CSS, including setting the background color, adjusting fonts, managing spacing, and aligning text to create a clean and consistent design.

3.2 Style the Event Title and Description:

The event heading and description are styled using CSS by adjusting the font size, color, spacing, and text alignment to make them clear, attractive, and visually prominent on the webpage.

3.3. Design the Event Information Section

The layout and readability of the event details section are improved using CSS by adding borders, spacing, background colors, and proper alignment to make the information clear and visually organized.

3.4 Enhance the Registration Form Layout:

The registration form is styled using CSS with a card layout that includes borders, padding, rounded corners, and shadow effects to enhance its visual appearance and presentation.

3.5 Style Fieldsets and Legends:

The field sets and legends are styled using CSS by adding borders, spacing, background highlights, and bold text to improve their visibility and organization within the form.

3.6 Improve Input Elements:

Consistent CSS styling is applied to textboxes, dropdowns, radio buttons, checkboxes, file upload fields, and text area elements, along with focus effects to improve user interaction and usability.

3.7 Button Styling:

The Submit and Reset buttons are designed using CSS with background colors, padding, rounded corners, hover effects, and smooth transitions to make them visually attractive and interactive.

3.8 Style the Participants Table:

The table is enhanced using CSS by adding borders, a background color for the header, alternate row styling, and hover effects to improve readability and visual clarity.

3.9 Style the Declaration Section:

The declaration checkbox is properly aligned using CSS and appropriate spacing is added to ensure it appears clear, organized, and visually balanced within the form.

3.10 Footer Design:

The footer is styled using CSS with a background color, centered text alignment, padding, and proper spacing to clearly display the contact information and improve the overall page layout.

4.CSS Concepts Used:

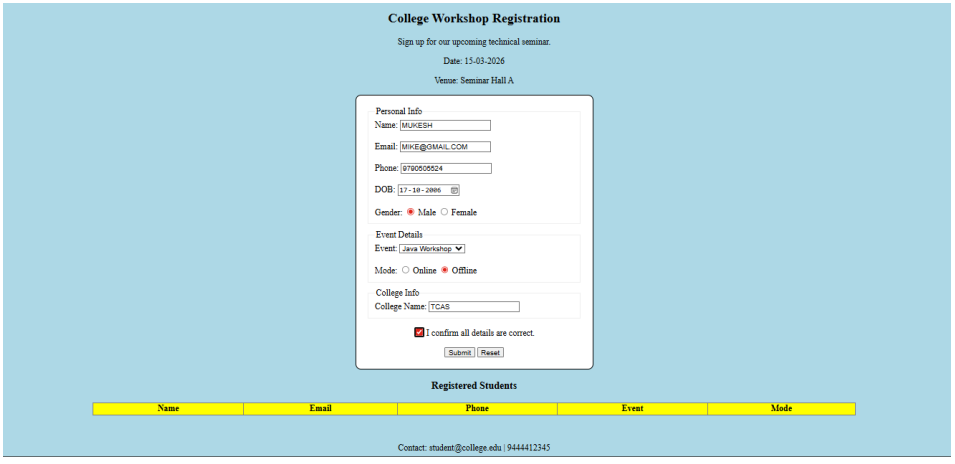
The project uses various CSS concepts such as selectors, box model properties, colors, typography, spacing, borders, shadows, hover effects, and table styling to enhance the layout and visual appearance of the web page.

---

5. Implementation Steps:

The CSS styling was applied step-by-step by first linking the CSS file to the HTML page, then adding styles for the body and overall layout, designing the form and field sets, styling input elements and buttons, enhancing the table appearance, and finally formatting the footer for a clean and consistent look.

6.Output:



7.Learning Outcome:

By completing this assignment, I gained a better understanding of CSS styling, layout control, and presentation design, including how to apply colors, spacing, borders, and alignment to create a visually organized and user-friendly web page.

---

8. Conclusion:

In conclusion, the HTML page was successfully enhanced using CSS to improve its visual appearance, layout, and user experience by applying consistent styling, organized structure, and interactive design elements.
